Interpretation Number: 1

Topic: Error in Note "a" of Table 8.

Relevant Clause: Table 8; subclause 9.3.1

Interpretation request

In IEEE Std C57.91-1995, **IEEE Guide for Loading Mineral-Oil-Immersed Transformers**, Note "a" of Table 8 reads 110 degrees C. This is incorrect. Is the allowed continuous temperature 110 degrees C or is it 100 degrees C?

Interpretation for IEEE Std IEEE Std C57.91-1995

There is an error in Note "a" of Table 8. IEEE has recently sent out an Invitation to Ballot for a corrigenda to C57.12.91. It includes corrections to several portions of the document. When the corrigenda is approved, Note "a" of Table 8 will be corrected to say 110 degrees C, rather than the 100 degrees C.

Clause 9.3.1 explains that the requirements for loading are in C57.12.00-2000, IEEE Trial-Use General

Requirements and Test Code for Dry-Type and Oil-Immersed Smoothing Reactors for DC Power Transmission. It also states that the continuous operation limit for the hottest-spot temperature is 110 degrees C.
